1. Introduction

1-1. INTRODUCTION

Model DM-4419 is a portable **bench** type digital multimeter (**DMM**) with a **4½** digit light emitting diode(LED). The DM-4419 has all the following industry-Standard features:

- ◎ **Voltage** measurements from **10µV** to **1000V** dc and **10mV** to **750V** true-rms ac.
- ◎ Current measurements from **100nA** to **10A** dc and **1mA** to **10A** true-rms ac
- ◎ Resistance measurements from **10mΩ** to **20MΩ**
- ◎ **Automatic** polarity indication and over range indication
- ◎ **Protect** ion from over loads and **protect** ion from transients of up to **600V**
- ◎ Dual-slop integration A-D **conversion** to ensure noise-free measurements.
- ◎ Long term calibration stability(**1year**)
- ◎ Safety and EMC : Approval at TUV

This **meter** has been designed and tested in accordance with safety and EMC.

- SAFETY : EN61010-1 Approval at TUV
- EMC REGULATIONS : EN50081-1, EN55022, class B
EN50082-1, IEC801-2,3,4
- **OVERTVOLTAGE**, CAT . II
- POLLUTION DEG. II

1-2. The DM-4419 is warranted for a period of one year upon shipment of the instrument to the original **purchaser**. Conditions of the warranty are given at the front of this manual. The DM-4419 is typically powered from ac line voltage.

I-3. ACCESSORIES

The **use** of the DM-4419 can be enhanced by the accessories available for this instrument.

The accessories listed

- Test leads : Iset
- Power **cord**; Ipc
- Operating manual : 1copy
- Fuse : Ipc

2. SPECIFICATIONS

2-1. ELECTRICAL

The electrical specifications given apply for an operation temperature of 18°C to 28 °C (64.4°F to 82.4°F), relative humidity up to 80%, and a 1-year calibration cycle.

2-2. Function

DC volts, AC volts, DC current, AC current, Resistance, Frequency
Diode test, hFE Continuity test,

2-3. DC Voltage

RANGE	RESOLUTION	ACCURACY
200mV	10µV	
2V	100µV	±(0.05% of reading +4 digit)
20V	1mV	
200V	10mV	
1000V	100mV	±(0.15% of reading +4 digit)

- INPUT IMPEDANCE ----- 10MΩ in parallel with <100pF all ranges
- NORMAL MODE REJECTION RATIO ----- >60dB at 60Hz or 50Hz
- COMMON MODE REJECTION RATIO ----- >90dB at dc, 50Hz or 60Hz
- COMMON MODE VOLTAGE(MAXIMUM) ----- 1000V dc or peak ac
- RESPONSE TIME TO ----- 2.5/second maximum
- MAXIMUM INPUT ----- 1000V dc or peak ac continuous
(less than 10 second duration both the 200mV and 2V ranges)

Toleranzangaben

S. 8 – 10

Sind ungültig

2-4. AC Voltage (True RMS)

RANGE	RESOLUTION	ACCURACY
200mV	10 μ V	$\pm(0.5\%+20\text{DIGIT})$, (45Hz ~ 1kHz) $\pm(0.8\%+10\text{DIGIT})$, (1kHz ~ 10kHz) $\pm(1.0\%+20\text{DIGIT})$, (10kHz ~ 20kHz) $\pm(3.0\%+30\text{DIGIT})$, (20kHz ~ 50kHz)
2V	100 μ V	$\pm(0.5\%+20\text{DIGIT})$, (45Hz ~ 300Hz) $\pm(0.8\%+10\text{DIGIT})$, (300Hz ~ 10kHz) $\pm(1.0\%+20\text{DIGIT})$, (10kHz ~ 20kHz) $\pm(3.0\%+30\text{DIGIT})$, (20kHz ~ 50kHz)
20V	1mV	$\pm(0.5\%+10\text{DIGIT})$, (45Hz ~ 300Hz) $\pm(0.8\%+10\text{DIGIT})$, (300Hz ~ 10kHz)
200V	10mV	$\pm(1.0\%+20\text{DIGIT})$, (10kHz ~ 20kHz) $\pm(3.0\%+30\text{DIGIT})$, (20kHz ~ 50kHz)
750V	100mV	$\pm(0.5\%+10\text{DIGIT})$, (45Hz ~ 1kHz)

- ① INPUT IMPEDANCE ----- 10M Ω in parallel with < 100pF all range
- ② COMMON MODE REJECTION RATIO ----- > 60dB at dc, 50Hz or 60Hz
- ③ RESPONSE TIME TO ----- 2.5/second max i mum
- ④ MAXIMUM INPUT ----- 750V rms or 1000V peak continuous
(less than 10 second duration both the 200mV and 2V ranges)
- ⑤ CREST FACTOR RANGE ----- Waveform with a Peak/RMS ratio of 1:1 to 3:1 at fullscale, increasing down range

2-5. DC Current

RANGE	RESOLUTION	ACCURACY
200mA	0.1 μ A	
2mA	1 μ A	$\pm(0.5\%+1\text{DIGIT})$
20mA	10 μ A	
200A	100 μ A	
10A	10mA	$\pm(0.75\%+3\text{DIGIT})$

- ⑥ OVERLOAD PROTECTION(ac/dc) ----- mA INPUT : built-in 2A/250V fuse
10A INPUT : built-in 10A/250V fuse

2-6. AC Current (True RMS)

RANGE	RESOLUTION	ACCURACY
2mA	0.1 μ A	$\pm(1.0\%+10\text{DIGIT})$, (45Hz ~ 10kHz)
20mA	1 μ A	$\pm(2.0\%+20\text{DIGIT})$, (10kHz ~ 20kHz)
200mA	10 μ A	
2A	100 μ A	$\pm(1.0\%+10\text{DIGIT})$, (45Hz ~ 2kHz)
10A	10mA	

- ◎ OVERLOAD PROTECTION(ac/dc) ----- mA INPUT :built-in 2A/250V fuse
10A INPUT :built-in 10A/250V fuse
- ◎ CREST FACTOR RANGE ----- Waveform with a Peak/RMS ratio
of 1:1 to 3:1 at full scale

2-7. Resistance

RANGE	RESOLUTION	ACCURACY
20051	10m Ω	$\pm(2.0\%+5\text{DIGIT})$
2K	0.152	
20k Ω	1 Ω	$\pm(2.0\%+2\text{DIGIT})$
200k Ω	10 Ω	
2M Ω	100 Ω	$\pm(0.5\%+2\text{DIGIT})$
20M Ω	1k Ω	

- ◎ OVERLOAD PROTECTION ----- 600V dc/ac rms in all range(1minute)

2-8. Frequency

RANGE	RESOLUTION	ACCURACY
20kHz	1Hz	$\pm(1.0\%+3\text{DIGIT})$
200kHz	10Hz	$\pm(2.0\%+3\text{DIGIT})$

- ◎ INPUT SENSITIVITY ----- ----- ----- ----- 100mVrms(min)
- ◎ OVERLOAD PROTECTION ----- 250V dc/ac rms

2-9. DIODE TEST

- ◎ TEST VOLTAGE ----- ----- ----- ----- Approx 4.5V
- ◎ TEST CURRENT ----- ----- ----- ----- Approx 1mA
- ◎ OVERLOAD PROTECTION ----- 600V dc/ac rms all range(1minute)

2-10. CONTINUITY TEST

- ◎ THRESHOLD ----- ----- ----- ----- 200 Ω or Less
- ◎ OVERLOAD PROTECTION ----- 600V dc/ac rms all range(1minute)

2-11. hFE measurements

- ◎ BASE CURRENT ----- Appr ox 3.5 μ A
- ◎ COLLECTOR TO EMITTER VOLTAGE ----- Approx 4.5V

2-12. ENVIRONMENTAL

2-12-1. Temperature Coefficient

< 0.1 times the applicable accuracy specification per °C for 0°C to 18°C and 28°C to 50°C(32°F to 64.4°F and 82.4°F to 122°F)

2-12-2. Operating Temperature ----- 0°C to 50°C(32°F to 122°F)

2-12-3. Storage Temperature ----- -20°C to 60°C(-4°F to 140°F)

2-12-4. Accuracy Guarantee ----- 18°C to 28°C(64.4°F to 82.4°F)

2-12-5. Relative Humidity

Below 80% under the use temperature of 0°C to 50°C(32°F to 122°F)

Below 70% under the storage temperature of -20°C to 60°C(-4°F to 140°F)

Below 80% under the accuracy guarantee of 18°C to 28°C(64.4°F to 82.4°F)

2-13. General Information

2-13-1. Maximum Common Mode Voltage ----- 1000V dc or rms ac
(low terminal potential with respect to power line ground)

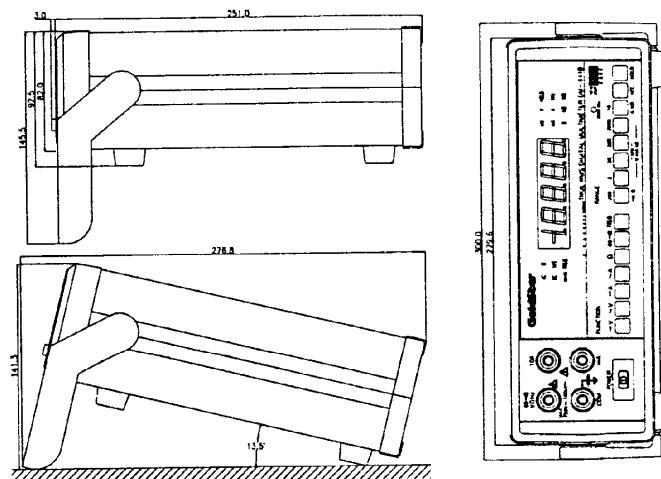

2-13-2. Dimensions ----- 25.0cm X 9.25cm X 25.1cm

2-13-3. Weight ----- 1.50kg

2-14. Power Requirements

2-14-1. LINE VOLTAGE ----- 103 to 126V ac 50 to 60 Hz
206 to 252V ac 50 to 60 Hz

2-14-2. POWER CONSUMPTION ----- 10Wmax

DM-4419 Dimensions

3. PREVENTIVE MAINTENANCE

Preventive maintenance, when performed on a regular basis, can prevent instrument breakdown and may improve the reliability of the digitalmultimeter. the severity of environment to which this instrument is subject will determine the frequency of maintenance. A convenient time to perform preventive maintenance is preceding recalibration of the instrument.

3-1. Disassembly

Remove the top cover and the bottom cover of the instrument. Most of the internal parts of the instrument are now accessible, if access to the front of the circuit board are necessary.

3-2. Cleaning

The instrument should be cleaned as often as operating conditions require. Accumulation of dirt in the instrument can cause component breakdown.

The covers provide protection against dust in the interior of the instrument. Loose dust accumulated on these covers can be removed with a soft cloth or small brush.

Dirt that remains can be removed with a soft cloth dampened in a mild detergent and water solution. Abrasive cleaners should not be used.

Cleaning the interior should only be occasionally necessary. The best way to clean the interior is to blow off the dust with a dry, lowvelocity stream of air. A soft-bristle brush or a cotton tipped applicator is useful for cleaning in narrow spaces or for cleaning more delicate components.

3-3. Visual Inspection

The instrument should be inspected occasionally for such defects as broken connections, improperly seated transistors, damaged circuit boards, and heat-damaged parts. The corrective procedure for most visible defects is apparent ; however, particular care must be taken if heat-damaged components are found. Overheating usually indicates other trouble in the instrument ; therefore, correcting the cause of the overheating is important to prevent recurrence of the damage

4. CIRCUIT DESCRIPTION

4-1. ANALOG TO DIGITAL CONVERSION

When all values to be measured are connected to R72, they are applied to UIO-8 and the LED driver signal of UIO-26, 25, 20, 19, 14, 29 and the BCD signal of UIO-15, 16, 17, 18 are output by integral constant of R69, R70, C32, C33 and the value is displayed on LED with UI3 BCD to 7-segment decoder. (See. P32 51 1-577-A1/3)

4-2. SYSTEM REFERENCE

The reference of the value(1.0000V) to be measured is applied to U10-40 at VR15. (See. P32 511-577-A1/3)

4-3. SYSTEM FREQUENCY

The 10MHz square wave generated at Y1(crystal) is attenuated to 100KHz by U11, UI2 decade counter and applied to UIO-28.

(See. P32 51 1-577-A1/3)

4-4. POWER CIRCUIT

AC power supply is used as input power, and the applied AC voltage is applied to each regulator IC passing 2 rectifier circuits at the 2nd side of the transformer. (See. P33 51 1-577-A2/3)

4-4-1. +5V CIRCUIT

As the voltage rectified through D15, D16, D17, D18 rectifier diode at the 2nd side of the transformer is applied to regulator IC 1 attached to the real panel, +5V is output to regulator IC 3 and applied through R82 to a circuit that needs +5V.

4-4-2. -5V CIRCUIT

Output of +5V is converted to -5V by being applied to DC-DC converter U19-8, and -5V is applied to the circuit that needs.

4-4-3. +15V CIRCUIT

Of the voltages rectified through D19, D20, D21, D22 rectifier diode at the 2nd side of the transformer, cathode of D20 and D21 is applied to U15-1, and at this time +15V is output to 3 and applied through D23 to the circuit that needs +15V.

4-4-4. -15V CIRCUIT

Of the voltages rectified through D19, D20, D21, D22 rectifier diode at the 2nd side of the transformer, anode of D19 and D22 is applied to U16-2, and at this time -15V is output to 3 and applied through D24 to the circuit that needs -15V.

4-4-5. FREQUENCY POWER (+5V) CIRCUIT

J14T and J14 are used as power supply for frequency measuring circuit by outputting power supply of +5V to 3 by applying output of +5V of D23 cathode to U20-1

4-5. IO-TIME AMPLIFYING CIRCUIT

All signals can be applied in DC voltage to R72 that is input of A-D converter, only through the IO-time circuit by using op-amp of UI. The IO-time circuit is operated by combining RE1, R10A, VR5 with function or the range switch, and the operation of the IO-time circuit is corresponding to DC voltage 200mV, 20V resistance 200Ω, 200kΩ and all remaining functions.

The principle of operation is that when the switch corresponding to the condition mentioned above is selected after power is supplied, RE1-6 and D5-anode is linked to GND and UI AMP circuit is amplified 10 times by R10A array resistance. (See. P32 51 1-577-A1/3)

4-6. DC VOLTAGE MEASURING CIRCUIT

DC voltage circuit is attenuated as much as 1/1, 1/100, 1/1000 by R1, R2, VR3, R5, VR4, R6 and linked to R72 through the IO-time amplifying circuit. (See. P32 51 1-577-A1/3)

4-7. AC VOLTAGE MEASURING CIRCUIT

This is same as the attenuator DC voltage circuit of the AC voltage circuit, and the attenuated signal is applied to CI2 through the IO-time amplifying circuit and then connected to R72 after being converted to DC at U2 rmc IC.

4-8. DC CURRENT MEASURING CIRCUIT

4-8-1. 2mA, 20mA, 200mA Measuring Circuit

The current applied to the input is connected to R72 through the IO-time amplifying circuit that meets with attenuator resistance at R32, R34, R37. (See. P32 51 1-577-A1/3)

4-8-2. 2000mA Measuring Circuit

The current applied to the input is connected to R72 through the IO-time amplifying circuit that meets with R5 at the input board. At this time, the relay in the input board starts working, but UI-3, UI-2 at the front board turn to the low state, while U3-1 is put in the high state and connects the front board P6 and the input board J1 with wire.

When the U3-1 signal is connected to the base of Q1 after passing input board R2 and sets Q1 in motion, the relay starts working and connects the current input terminal to R5.

(See. P32 51 1-577-A1/3 , P35 511-578-A and P36 511-579-A)

4-8-3. 10A Measuring Circuit

The current applied to the input is connected to R72 through the IO-time amplifying circuit that meets with R100 Mn resistance at the input board. (See. P32 51 1-577-A1/3 and P36 511-579-A)

4-9. AC CURRENT MEASURING CIRCUIT

The AC current measuring circuit keeps its state until the output of the IO-time amplifying circuit and then becomes equal to the AC voltage circuit. The AC current signal is amplified 10 times when applied to CI2 after passing the IO-time amplifying circuit and then linked to R72 as it is converted to DC from U2 true rms. (See. P32 511-577-A1/3)

4-10. RESISTOR MEASURING CIRCUIT

The resistor measuring circuit can measure 200Ω and $2k\Omega$ by R4, VR1, $20k\Omega$ by R4, VR1, R3, VR2, and $200k\Omega$, $2M\Omega$ and $20M\Omega$ by R4, VR1, R3, VR2, R2, R1. Measurement is performed in the following way: the source voltage of the measuring circuit is supplied to A marked on the circuit diagram by U5 output, and DC voltage appearing in proportion between resistance to be measured and each attenuator resistance is connected to R72 after passing the IO-time amplifying circuit.

(See. P32 51 1-577-A1/3)

4-11. DIODE AND CONTINUITY MEASURING CIRCUIT

4-11-1. Diode Measuring Circuit

When diode is connected in the forward direction to the input, the forward voltage is applied between R18 and R19 by the voltage from R17 and the attenuated voltage by R19, R22 is linked to R72 through the IO-time amplifying circuit after passing R24.

(See. P32 51 1-577-A1/3)

4-11-2. Continuity Measuring Circuit

The continuity measuring circuit sets the reference voltage at U3-3 by R20, R21, R23. When resistance is connected to the input, the voltage is applied between R18 and R19 by the voltage from R17. The attenuated voltage by R19 and R22 is linked to U3-2 through R24 and connected to R72 through the IO-time amplifying circuit.

At this time, if the U3-2 voltage is lower than the reference voltage of U3-3, U3-1 turns to the high state and puts U4-1 in the high state through R26, the input of the buzzer circuit, and then sets the buzzer in motion by operating U4 oscillation circuit.

(See. P32 511-577-A1/3)

4-12. FREQUENCY MEASURING CIRCUIT

When the frequency described in the specifications is input by using the frequency generator, the frequency is applied to U7-3 through R52, C25. At this time, if the signal of frequency is higher than that of U7-2, the signal of U7-1 turns to the high state and becomes the trigger signal of U8-2 by being differentiated by C26, R55. When the trigger signal is applied to U8-2, U8 monostable multivibrator with U8-3 output generates the Square-wave of 20kHz with time constant of R59, C27 and 200 kHz with time constant of R58, C27.

The generated Square-wave 20 kHz and 200 kHz through the analog switch of U9-12 and U9-13, respectively, and the attenuated signal by VR14, R85 through the IO-time amplifying circuit are connected to R72.
(See. P32 51 1-577-A1/3)

4-13. hFE MEASURING CIRCUIT

When the collector-current amplification factor, hFE, is inserted into the front panel hFE socket according to the transistor type (NPN or PNP) and the pin type, it is connected to R97, R98 and R99 of the main board and becomes the self bias circuit. TR turns on and the collector current flows. At this time, the voltage dropped by R97 is connected to R72 through the IO-time amplifying circuit.

(See. P33 51 1-577-A2/3)

4-14. FRONT PANEL FUNCTION AND RANGE DISPLAYING LED DRIVER CIRCUIT

The signal of the driver circuit of LED displaying the front panel range is made by combination of function and range switch selection and U17, UI8 IC. Function LED signal is made by combination of R96 and the function switch. (See. P33 51 1-577-A2/3)

4-15. HOLD CIRCUIT

If the HOLD switch on the front panel is pressed, the value on display is held by connecting UIO-31 to GND. At this time, the over-range value does not appear. In addition, the hold LED on the front panel is displayed when supplied with power through R33.

(See. P32 51 1-577-A1/3 and P33 511-577-A2/3)

5. CALIBRATION

provides complete instrument repair and calibration at our oversea's office and authorized dealer.

5-1.CALIBRATION INTERVAL

To maintain instrument accuracy, perform the calibration of the DM-441B unit at least every one year if used frequently.

5-2.PRELIMINARY PROCEDURE

This instrument should be calibrated at an ambient temperature 18°C to 28°C with relative humidity up to 80% for best Overall

- 5-2-1. Set the instrument controls as given in the preliminary control setting. Calibration must be performed after warmup time of at least 15 minutes after power is supplied.
- 5-2-2. The part should be calibrated with calibration VR marked in the electrical part arrangement.

5-3.Initial Starting Procedure

Before starting calibration, the following order must be kept:

- 5-3-1 . Remove the power cord and the test lead and open the cover by loosening 4 screws fastening the bottom cover.
- 5-3-2. Check 2A/250V and 10A/250V fuse at the input board and the fuse at the real plate.
- 5-3-3. Turn on the power by pushing the power switch.

5-4.TEST EQUIPMENT

- 5-4-1. DMM calibrator (Fluke 5101B, 5220A or equal equipment) ----- 1 set
- 5-4-2. Dacaderesistor (General radio 1433-H or DMM calibrator) ----- 1 set
- 5-4-3. Signal generator (HP 3325B or equal equipment) ----- 1 set

5-5.CALIBRATION AND THE TEST PROCEDURE

5-5-1. Check-Up of Functions

Check the LED display as shown in the following table by choosing the functionals/W to DMM to be measured.

FUNCTION	FUNCTION LED	RANGE LED
= V	DC	mV . V
~V	AC	mV . V
= A	DC	mA . A
~A	AC	mA . A
Ω	Ω	Ω . kΩ . MΩ
►•••)	►•••)	
FREQ	FREQ	KHz
hFE	hFE	

5-5-2. Check-Up Test of the LED Display

Choose the resistance range and make the input short to confirm the LED display as shown in the following table.

LED Choices	LED Display
200 Ω .	00.00'
2 kΩ	.0000'
20 kΩ	0.000
200 kΩ	00.00
2000 kΩ	000.0
20 MΩ	0.000

Note : ' can be changed between 0-numeral digit by the test lead resistance.

5-5-3. DC Voltage Calibration

- 1) Choose DC V for the function switch and connect RED READ to the INPUT terminal and BLK READ to the Common terminal.
- 2) Calibrate the LED display at 00.00 with VR6(①) by choosing the 200mV RANGE and making the input short.
- 3) Calibrate VR15(②) till 1.9000V is displayed on LED by choosing the 2V RANGE and applying DC 1.9V to the input.

- 4) Calibrate VR3(③) till 190.00V is displayed on LED by choosing the 200V RANGE and applying DC 190V to the input.
- 5) Calibrate VR4(④) till 1000 V is displayed on LED by choosing the 1000V RANGE and applying DC 1000V to the input.
- 6) Calibrate VR5(⑤) till 190.00mV is displayed on LED by choosing the 200mV RANGE and applying DC 190mV to the input.

5-5-4. AC VOLTAGE CALIBRATION

- 1) Choose AC V for the function switch and link RED READ to the input terminal and BLK READ to the common terminal.
- 2) Calibrate the LED display at .0000 with VR9(⑥) by choosing the 2V RANGE and making the input short.
- 3) Calibrate VR8(⑦) till 1.9000V is displayed on LED by choosing the 2V RANGE and applying AC 1.9V/60Hz to the input.
- 4) Calibrate VC2(⑨) till 190.00mV is displayed on LED by choosing the 200mV RANGE and applying AC 190mV/50kHz to the input.
- 5) Calibrate VC1(⑩) till 19.000V is displayed on LED by choosing the 20V RANGE and applying AC 19V/10kHz to the input.

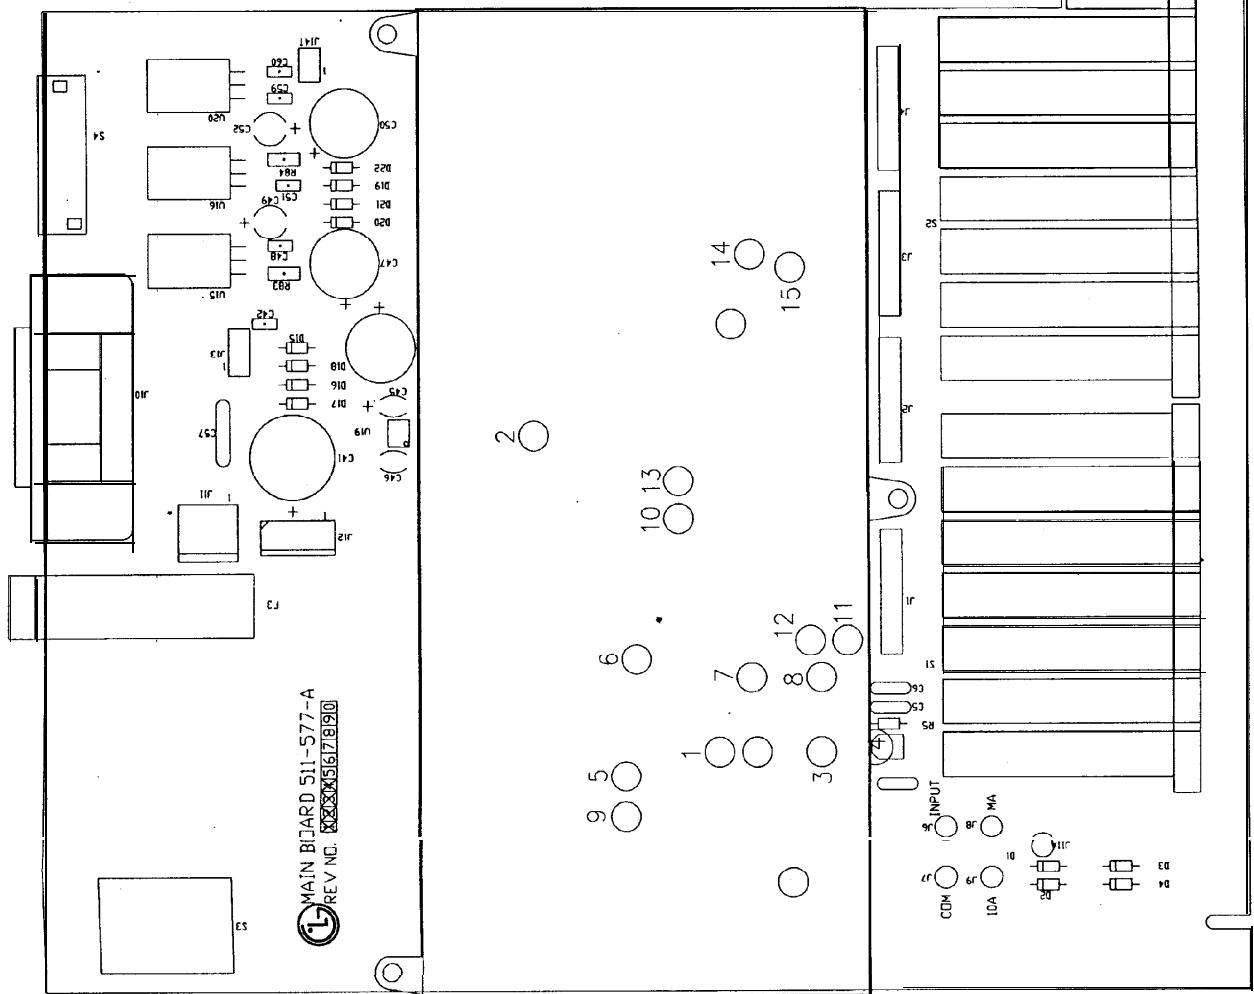

5-5-5. Resistance Calibration

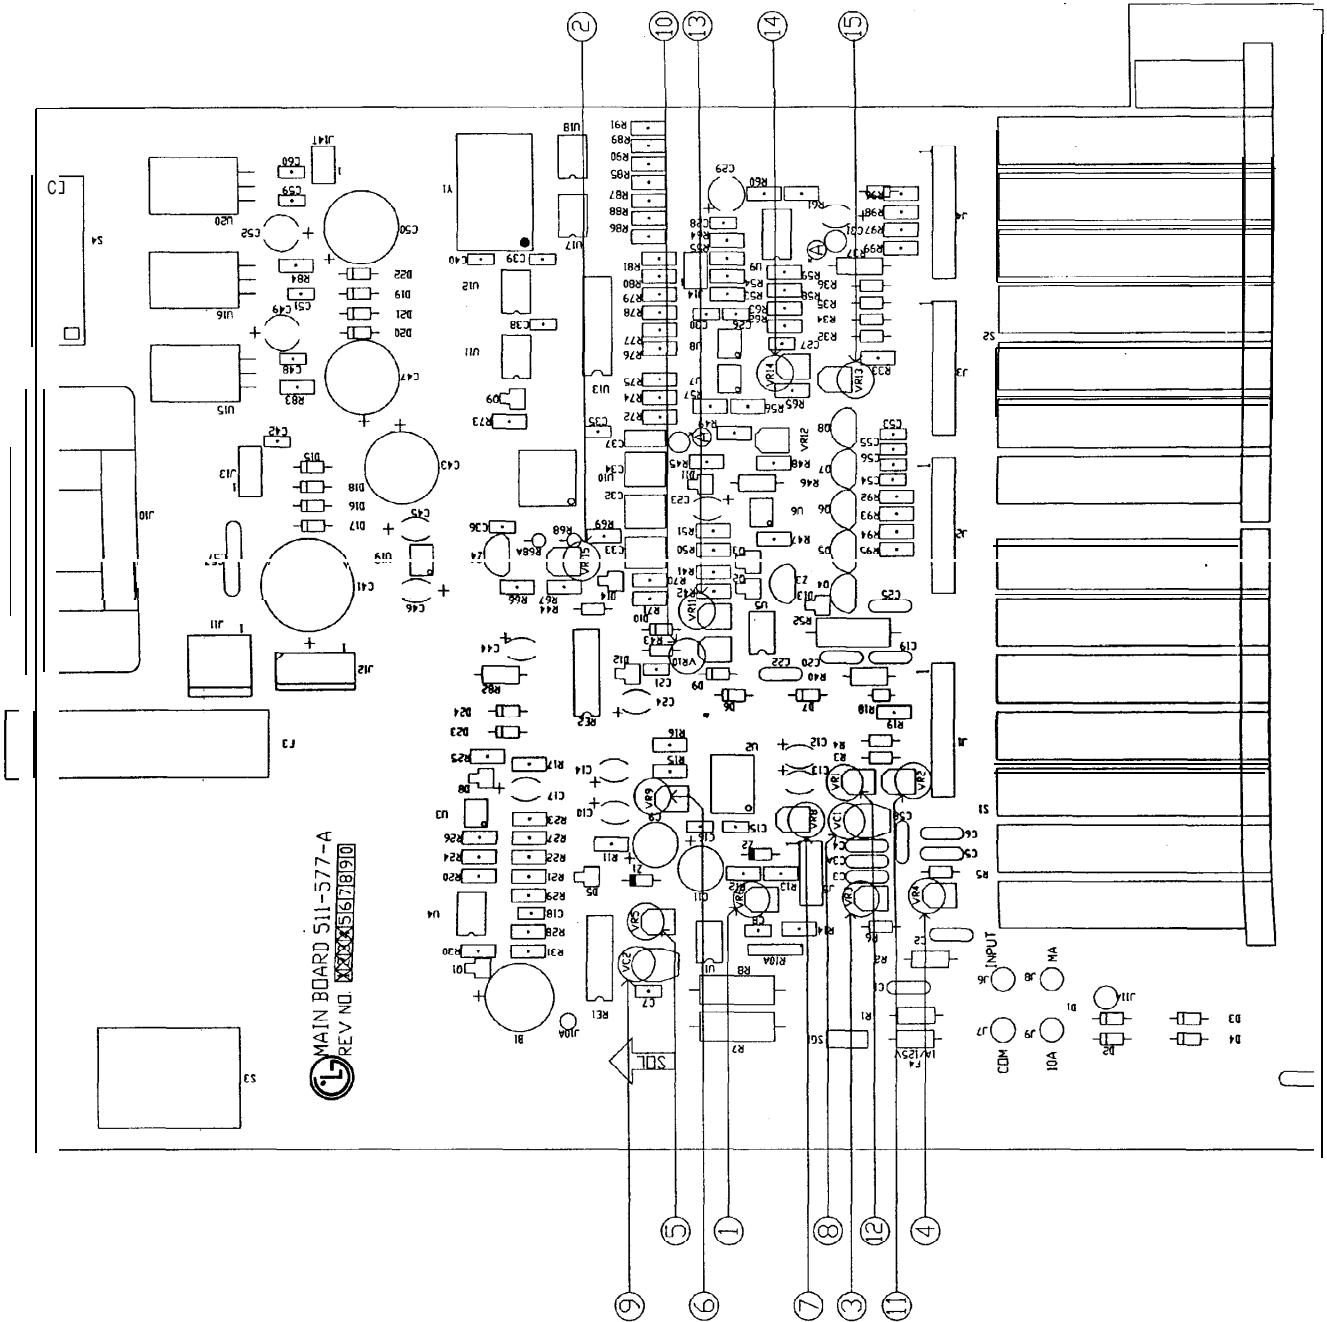

- 1) Choose resistance for the function switch and link RED READ to the input terminal and BLK READ to the common terminal.
- 2) Calibrate the LED display at $100.00\text{k}\Omega$ with VR10(⑪) by choosing the $200\text{k}\Omega$ RANGE and applying $100\text{k}\Omega$ to the input.
- 3) Calibrate VR2(⑫) till $10.000\text{k}\Omega$ is displayed on LED by choosing the $20\text{k}\Omega$ RANGE and applying $10\text{k}\Omega$ to the input.
- 4) Calibrate VR1(⑬) till $1.0000\text{k}\Omega$ is displayed on LED by choosing the $2\text{k}\Omega$ RANGE and applying $1\text{k}\Omega$ to the input.
- 5) Calibrate VR11(⑭) till $10,000\text{M}\Omega$ is displayed on LED by choosing the $20\text{M}\Omega$ RANGE and applying $10\text{M}\Omega$ to the input.

Note: When calibrating $10\text{M}\Omega$, a short PROBE or STANDARD resistance must be used to reduce effects caused by the PROBE.

5-5-8. FREQUENCY CALIBRATION

- 1) Choose frequency for the **function switch** and link RED READ to the input terminal and BLK READ to the common terminal.
- 2) Calibrate the LED display at 19.000kHz with VR14(**14**) by choosing the 20kHz RANGE and applying 19kHz/100mV to the input.
- 3) Calibrate VR13(**15**) till 150.00kHz is displayed on LED by choosing the 20kHz RANGE and applying 150kHz/100mV to the input.

7. PARTS LIST
